The abstract has been amended in the manner suggested by the Examiner. In the drawings FIGs. 4, 5, 6, 7, 8, 8a, 11 and 17 have been amended by removing reference signs not mentioned in the specification. In addition, FIG. 6 has been amended by adding the reference sign 700X. Support for the addition of the reference sign is found on page 13, line 2; page 16, line 13; page 28, lines 14 and 31 and page 29, lines 6 and 9. Also, reference sign 700X is analogous to reference signs 500X, 600X, 800X, 900X and 950X, shown in FIGs. 4, 5, 7, 8 and 8a, respectively, in the manner that they are used in the description. No new matter has been added to the drawings.

The specification has been amended to remove reference sign 608a not shown in the drawings, to remove all references to a FIG. 18, and to correct a typographical error on page 5.

There are three independent claims (1, 3 and 51) in the application, and they stand rejected under 35 U.S.C. 102(e) as being anticipated by Ferrel (U.S. Patent 5,584,480 B1). Amended claim 1 recites, *inter alia*, “a news story filter program for periodic extraction of text information from the news print publication electronic files.” Ferrel does not disclose,

nor is it inherent in Ferrel, to periodically extract text information from news print publication electronic files.

Amended claim 3 recites, *inter alia*, “a news story filter program for extracting text information from the news print publication electronic files.” Amended claim 51 recites, *inter alia*, “extracting raw story text and classification information and at least one tag in the raw story text from the news print publication electronic files, converting the text information and preserved tags into a database format, and storing the text information and preserved tags in the editorial database.” Ferrel does not disclose, nor is it inherent in Ferrel, to extract and store a tag in the raw story text from news print publication electronic files.

Finally, amended claim 51 recites, *inter alia*,

extracting raw story text and classification information and at least one tag in the raw story text from the news print publication electronic files,

converting the raw story text and classification information and the at least one tag in the raw story text from the news print publication electronic files into an editorial database format,

storing the converted raw story text and classification information together with the at least one tag in the raw story text as converted story text files in an editorial database....

Ferrel does not disclose, nor is it inherent in Ferrel, to extract and store a tag in the raw story text from news print publication electronic files.
